Shapes Inc

A shared thread where people and AI work together, with custom shapes that can search, code, design, and complete tasks.

About

Shapes Inc is an AI collaboration app that puts people and AI in the same shared thread. It lets you talk to your friends, your own OCs, favorite characters, or custom-made shapes without switching apps, so everyone can work together in one place. The app is built around a simple idea: humans and AI should be equal participants in the conversation, and each shape can search, code, design, or help move a project forward. Shapes Inc is free to use, and it is designed for chat, coordination, and creative teamwork.

What is Shapes Inc

[Shapes Inc](#)[Visit ↗](#)

Shapes Inc is an AI collaboration app built around a shared thread where humans and AI can talk together. Instead of treating AI like a separate sidebar or an isolated prompt box, Shapes Inc puts everyone in the same room so the conversation, the task, and the output stay connected. The app describes itself as a place where you can talk to AI, people, or both, and where you can make your own AI shapes rather than browse only prebuilt bots.

It is aimed at situations where a group wants momentum: a friend planning a trip, a study group making practice material, a creator building a project, or a crew that needs help with search, code, or design. The core Shapes Inc idea is that the shape is not just a tool; it joins the thread like a member of the group.

Key features

Shapes Inc centers on a few concrete features that make the AI collaboration app distinct:

Shared-thread collaboration: Friends and shapes work in one conversation, so context stays visible and no one has to jump between apps.

Custom crew building: You can name your shapes and assign them roles for the project you are making.

Autonomous task loops: You can set a goal, let a shape execute, review the result, and continue with the next loop after feedback.

Social awareness: Shapes are described as able to read the room, knowing when to contribute, when to ship, and when to stay quiet.

Multiple use cases: The site points to trip planning, starting a company, study groups, and watch-alongs as examples of how the AI collaboration app can fit into real conversations.

Free entry point: The site states that it is free, which lowers the barrier for trying the system.

The product also emphasizes that a shape can search, code, design, and actually get things done, which suggests it is meant for active work rather than passive chatting.

How to use it

Shapes Inc

Using Shapes Inc starts with creating an account and entering a room or thread. From there, you can add people, AI, or both to the same conversation. The flow is simple, but the point is to keep the AI collaboration app tied to a real task instead of treating it like a one-off prompt.

Sign up on Shapes Inc and open a room or shared thread.

Add the people, characters, or shapes you want in the discussion.

Give a shape a role that matches the project, such as planner, researcher, coder, or designer.

Set a goal or ask the group to work through a task together.

Review the shape's output, react in the thread, and give feedback so the next loop improves.

Keep the conversation going until the project reaches a useful result.

Because the app supports both social chat and task execution, it works best when you already know what you want to make, book, explain, or organize.

Who it is for

Shapes Inc is a good fit for people who want an AI collaboration app that feels social instead of isolated. It should appeal to:

Creators who want custom AI helpers for brainstorming, drafting, or building.

Friends planning together who want flights, stays, budgets, and decisions handled in one place.

Students and study groups that need explanations, quizzes, and practice sets.

Small teams and founders who want a lightweight way to involve AI in early product work.

Fans and community members who want to chat with favorite characters or custom OCs in a live thread.

The product is especially relevant if you like the idea of an AI collaboration app that behaves more like a participant than a utility.

Shapes Inc

Shapes Inc is promising, but it is not the same as an official booking service, a verified research platform, or a fully documented enterprise workflow tool. If you need airline tickets, hotel reservations, legal answers, or other high-stakes results, you should verify everything with the official provider before acting on it.

A few practical caveats matter:

The site says shapes can search, code, and design, but it does not spell out the exact limits, models, or supported integrations.

The “autonomous” loop concept suggests the shape can keep working, yet the documentation shown here does not describe controls, guardrails, or approval settings in detail.

Shapes Inc is built for collaboration, so it may be less appropriate if you want a private single-user chatbot with no social context.

Character, OC, and crew creation are central to the experience, but the exact content moderation rules and publishing controls are not clear from the available material.

For casual teamwork, brainstorming, and creative coordination, the AI collaboration app looks useful and distinct. For anything that depends on accuracy, compliance, or external confirmation, treat the thread as a starting point and check the original source before you rely on it.

Shapes Inc works best when you want an AI collaboration app that keeps the whole conversation in one place, lets your crew shape the work, and turns chat into action.
